OverviewHistoryAttributesDesignOperationSpecific energy and energy densityApplicationsDevelopmentThe vanadium redox battery (VRB), also known as the vanadium flow battery (VFB) or vanadium redox flow battery (VRFB), is a type of rechargeable flow battery which employs vanadium ions as charge carriers. The battery uses vanadium's ability to exist in a solution in four different oxidation states to make a battery with a single electroactive element instead of two.

The effects of three types of additives on positive and negative vanadium electrolytes are particularly
