We deliver a testing and certification program to evaluate BCE equipment, helping manufacturers create products that comply to safety standards.

NYC Fire Code §309.3 requires that "Battery packs and other removable storage batteries shall not be stacked or charged in an enclosed cabinet (unless the cabinet is specially designed and ...

The first edition of UL 1487, the Standard for Battery Containment Enclosures, was published on February 10, 2025, by UL Standards & Engagement as a binational standard for the United ...

CSA Group will evaluate or test your projects including cells, packs, appliances and tools, e-mobility devices, and energy storage systems at our state-of-the-art laboratories. We can also ...

Battery test standards, including by IEC, SAE, and UL, guide manufacturers at every stage of the design process. Various testing models exist to verify safe operation in real-world conditions ...

This Standard addresses battery containment enclosures intended to mitigate the heat, fire, and deflagration hazards that can result from lithium-ion battery thermal runaway.

These standards collectively ensure that lithium-ion battery cabinet designs are tested for fire endurance, containment efficiency, and user safety before they enter the market.

It contains a searchable database with over 400 standards. Search elements like "performance test" and "design" have been added to find quickly the set of applicable standards.

Designed and optimized for datacenter applications, they are the first lithium-ion battery cabinets to fulfill the UL 9540A fire test safety standards for Energy Storage Systems (ESS) referenced ...
