Does Italy have a single digital platform?

For the first time, the Italian national transmission grid operator is publishing its operating data, market data and statistics on the electricity system on a single integrated digital platform.

What is the breakdown by sector of final electricity consumption in Italy?

According to the International Energy Agency, the breakdown by sector of final electricity consumption in Italy has evolved as follows: The transmission of high voltage electricity in Italy is provided by Terna. The transmission network has 63,500 km of HV lines, 22 interconnection lines with foreign countries, 445 transformer stations.

How much energy does a data centre use in 2022?

Data centres and data transmission networks each accounted for 1-1.5% of global electricity use globally in 2022 (IEA,2023a). Table 1. Global trends in digital and energy indicators,2015-2022 In contrast to modest growth at the global level,there has been significant growth in some countries,especially for data centre energy use.

How much electricity do data centres use?

United Kingdom: National Grid ESO,the national the UK's national electricity system operator,estimates that data centres used 4-7 TWhof electricity in 2020,equivalent to 1.3-2.5% of national electricity use (National Grid ESO,2022).

The publication "Statistical Data on electricity in Italy" is prepared annually by Terna. Drawn up until 1998 by Enel, and later by GRTN.

This study reviews and uses existing literature and public data sources to estimate the energy consumption of data centres and telecommunication networks in the European Union (EU-27) ...
