What is a floating closed containment system in Singapore?

The latest generation of a floating closed containment system in Singapore was developed by EcoArk, with co-funding support from SFA. It is purpose-built and incorporates high-tech features including the RAS and green energy solutions to power the farm.

How are automatic feeders revolutionizing aquaculture?

Abstract Automatic feeders are revolutionizing aquaculture by enabling precise and controlled feeding regimens that optimize growth, reduce feed waste, and enhance the overall efficiency of farming...

Are mechanized feeders the future of aquaculture?

Expanded deployment of mechanized feeders in aquaculture represents a transformative opportunity to advance sustainability, efficiency, and profitability within the industry. This review compared different demand and automatic feeders, comparing their pros and cons while presenting configurations for different use cases and farm types.

Can automated feeders meet global seafood demands?

Finally, directing this research and innovation to address challenges (e.g., feeder reliability in harsh aquaculture environments and optimal feed formulations for diverse species) is critical for realizing the full potential of automated feeders in meeting global seafood demands while safeguarding aquatic ecosystems.

In this report, we delve into the current state of the Asian aquaculture industry, its challenges, opportunities, and highlight the top 10 companies driving innovation and growth in ...

Demand feeders provide some similar benefits but with feeding tailored to fish appetites and, in some cases, feed dispersal without electricity. This review explores the ...

Yes, a portable magnetic electric air pump with fast-charging capability can significantly stabilize dissolved oxygen levels in remote aquaculture systems when grid power fails--especially for ...

This White Paper is broadly aligned with the strategic goals of the Blue Transformation Roadmap and provides guidance on how to translate them into actions to support sustainable ...

With the advent of the AI digital era, we focus on the application of smart technology to provide breakthrough solutions for the aquaculture and electric vehicle charging markets.

This is a curated collection of technical documents that are relevant to aquaculture in the Asia-Pacific region. This are technical outputs of APFIC workshops or the APFIC Secretariat.

This review also thoroughly discussed various sustainable challenges such as waste generation, the use of chemicals and drugs, the outbreak of diseases, and others ...

Shipping container fish farms are becoming an innovative response to the global need for reliable and scalable aquaculture systems. These portable farms are not just handy but also ...

This review also thoroughly discussed various sustainable challenges such as waste generation, the use of chemicals and drugs, ...

FAO has established a Regional Technical Platform on Aquaculture in Asia to showcase some of the innovations that can contribute to the upscaling of the transformation of aquaculture in Asia ...
