Can Uganda extend the power grid to rural areas?

The Government of Uganda has limited resources for extending the grid to rural areas. At the moment, the Government's focus is on solving the power supply crisis that is crippling the national economy. Based on an improved power generation it will concentrate its efforts to extend the grid to major urban and peri-urban areas.

Is the wind energy resource in Uganda sufficient for large-scale electricity generation?

This study concluded that the wind energy resource in Uganda is insufficient for large-scale electricity generation. However, the wind resource may be suitable for special applications, such as water pumping in remote areas and for small-scale electricity generation in mountainous areas.

Who leased Nalubale & Kiira hydro power stations?

With the liberalization of the economy and the unbundling of the electricity utility, both Nalubale and Kiira hydro power stations were leased to Eskom (U) Ltd under a 20-year concession agreement. The two hydropower stations form the back bone of the electricity supply network in the country.

Uganda is endowed with a number of energy generation sources, however; these sources are spread out or scattered throughout the country. This makes transmission of power from the ...

This capacity primarily comes from the country's two major hydroelectric power plants, the Bujagali power station, with a capacity of 250 MW that became operational in 2011, and the ...

This article lists all power stations in Uganda. As of September 2024, Uganda's installed national generation capacity was 2,048.1 MW of electricity. [1]

The locations of power generation facilities that are operating, under construction or planned are shown by
