What is a containerized battery energy storage system?

Containerized Battery Energy Storage Systems (BESS) are essentially large batteries housed within storage containers. These systems are designed to store energy from renewable sources or the grid and release it when required. This setup offers a modular and scalable solution to energy storage.

What is a transportable energy storage system?

Referred to as transportable energy storage systems, MESSs are generally vehicle-mounted container battery systems equipped with standard-ized physical interfaces to allow for plug-and-play operation. Their transportation could be powered by a diesel engine or the energy from the batteries themselves.

How does mobile energy storage improve distribution system resilience?

Mobile energy storage increases distribution system resilience by mitigating outages that would likely follow a severe weather event or a natural disaster. This decreases the amount of customer demand that is not met during the outage and shortens the duration of the outage for supported customers.

Does Consolidated Edison have a mobile energy storage system?

In 2016, Consolidated Edison of New York announced their plans to develop an 800 kWh MESS unit with ElectroVaya, a lithium-ion battery company. Power Edison has deployed mobile energy storage systems for over five years, offering utility-scale plug-and-play solutions.
