The purpose of this article is to design, construct, install and test a stationary (non-tracking) concentrating system in Irbid, Jordan. Bifacial solar cells are used in the design.

In order to address the issue of a solar utilization system with low efficiency, this paper designs a new solar conversion system based on photovoltaic concentration and ...

This paper gives an insight into the design of concentrating solar power (CSP) systems. The basic design of several types of CSP system is presented alongside their ...

The key design and analysis issues are: optical, structural, and mechanical. The paper provides a detailed description of the design issues of this solar concentrating system.

In this paper, the design and development of a solar cycloidal concentrating system along with utilization of the tapered receiver is presented. For the determination of the ...

Combining concentrating solar power (CSP) [2, 3] with thermal energy storage presents a promising solution to the dual challenges of fossil fuel scarcity and new energy ...

"Design and Optimization of Concentrated Solar Power Tower Systems with Thermal Energy Storage" by Gary G. May, Nathan P. Siegel, and Nathan S. Lewis (Energy & Environmental ...

Its thorough overview of this technology includes the foundational scientific principles, system design and development, and growing applications. It offers a one-stop ...

This paper gives an insight into the design of concentrating solar power (CSP) systems. The basic design of several types of CSP ...

Typically, CSP technologies are constructed at utility scale (50MW or greater), with higher plant capacity factors than solar PV due to their ability to store excess heat energy gathered during ...

In this paper, we presented a simulation method to assess and evaluate the performance of a simple optical design composed of a split spectrum combined with a solar concentrator, both ...
