Will shared energy storage participate in the operation mode of multi-virtual power plant?

Considering the high investment cost of the energy storage system, it is proposed that the shared energy storage will participate in the operation mode of the multi-virtual power plant system as an independent subject, which will help to realize a win-win situation in cooperation between the VPP operator and the shared energy storage operator.

What is user-side shared energy storage?

User-side shared energy storage is composed of interconnection and mutual benefit of adjacent energy storage devices in the same area, so the power loss in the power interaction process can be ignored [17].

Is user-side energy storage a waste of resources?

However, the disorderly management mode of user-side energy storage not only causes a waste of resources, but also brings hidden dangers to the safe operation of the power grid, such as stability, scheduling and operation, power quality and other problems.

What is shared energy storage?

Shared energy storage is independently configured by a third-party operator and provides energy storage services for multiple virtual power plants. The outer layer is optimised by maximising the annualized revenue of the shared energy storage operator as shown in the following equation.

To address this issue, this paper proposes a user-side shared energy storage pricing strategy based on Nash game. Firstly, an optimal operation model is established for ...

On August 8, Gotion High-Tech cooperated with Datang Tangshan New Energy to build 200MWh user-side energy storage power station, and cooperated with Linhai ...

Based on the predicted life of energy storage and the dichotomy method, the optimal energy storage configuration results are ...

We adopt a cooperative game approach to incorporate storage sharing into the design phase of energy systems. To ensure a fair ...

Extreme weather events can result in substantial economic losses to distribution networks. Enhancing the resilience of distribution networks is crucial for swif.

Based on the concept of sharing economy and considering the complementary characteristics of source and load resources between different virtual power plants, this paper ...

This study addresses the pricing issue of shared energy storage (SES) services independently invested by the shared energy storage operator (SESO). We develop a user ...

An optimal scheduling method for cooperative operation of shared energy storage among multiple user types is proposed in this paper, which relied on asymmetric Nash ...

To address these challenges, this paper proposes a shared energy storage allocation strategy for renewable energy plant clusters, considering alliance cooperation costs ...

We adopt a cooperative game approach to incorporate storage sharing into the design phase of energy systems. To ensure a fair distribution of cooperative benefits, we ...

The event focused on the development paths of user-side energy storage under the backdrop of new power system construction, and provided solutions for energy transition in ...

Based on the predicted life of energy storage and the dichotomy method, the optimal energy storage configuration results are obtained.
